

Graham Jefferson
CEO
NTT Cloud Services

Graham is an experienced information technology lawyer. Much of Graham's experience is with cross-border technology transactions and he is familiar with the challenges thrown up by multi-jurisdiction deals.

Graham completed a BSc (computer science) at the Australian National University and worked as an analyst programmer for the Commonwealth Attorney General's Department before moving to the law. His honours thesis in law was on legal expert systems and after graduation he worked as a judge's research assistant. He then completed a period of general legal practise (crime, litigation, general commercial).

He specialised in information technology law (TMT) by moving in-house to work with financial services institutions. After more than a decade in the financial services sector Graham is now working for a technology company, Dimension Data, in their Cloud business unit.

Graham's interests are in the social and legal issues raised by information technology and the ways that technology can make the practise of law more effective.

His specialties include: complex technology transactions, cloud computing, data protection, privacy and data sovereignty, outsourcing and offshoring, legal process outsourcing and technology disputes mediation.
